Environmental concern  
and a pro-ecological  
attitude are paramount  
values of the brand

# We have planted over 16 million trees

### We plant trees

For every pack of Barlinek flooring sold, we plant 1 tree. Barlinek's Customers Forest is growing in Poland, Russia, Romania and Ukraine and today includes more than 16,000,000 trees!

### We save falcons

We co-finance a scheme to restore the tree-dwelling population of the peregrine falcon. Thanks to the activity undertaken over the past few years it has been possible to return as many as 55 of these beautiful birds to the forests.

### We protect „Bartek” the Oak

We also allocate funds to carry out the necessary renovation work to save the ancient Bartek Oak - Poland's most famous monument to nature.

### The company's green policy

Environmental concern and a pro-ecological attitude are paramount values of the brand. It is in nature that we find our inspiration, where we obtain the raw materials for manufacturing and it is out of concern for it that we conduct a varied programme of ecological activities.

### Responsibility

The raw materials used in production are derived exclusively from sustainable forestry areas, which is confirmed by the prestigious Forest Stewardship Council® (FSC) Certificate.

BARLINEK  
INSTITUTE  
OF  
DESIGN

# Barlinek Institute of Design

## **BIOD**

Barlinek Institute of Design is a platform for architects that dedicates support by our professional consultants, it prioritises service allowing access to the data base of our products (CAD textures).

Barlinek Institute of Design also organizes periodical free training to architects in many polish cities and also at our factory in Barlinek.

We also organize an international competition "Creations of Nature", as well as taking part in the most important design festivals in Poland and the rest of the world. We show wood as a raw material which accompanies us in everyday life, sometimes in a way that is not obvious but quite surprising.

For over 40 years  
creator and inventor of  
connectors  
for the Barlinek company.

**Marek Konstańczak**

R&D Development Section Manager

# Like this last time happened

The wood industry evolved in Barlinek already in the 19th century. Until the the end of the World War II a sawmill, a carpentry shop and a furniture manufacture operated. There were also other sawmills that after the War merged into one company: the Wood Company of the National Forest Holding „The State Forest” in Barlinek. At the beginning the sawmills processed coniferous and deciduous timber.

Wood processing capacity reached around 100 m<sup>3</sup> per day. At the time, the carpentry shop produced furniture for schools and institutions, as well as anti-snow fences and land cars. From 1947 production increased and expanded by the following articles: chairs, carpentry and wooden haberdashery.

From the 1st of January 1959 the company took the name of the Factory of the Wood Industry in Barlinek.

On the 1st of June 1999 the voivode of the West Pomeranian voivodeship decided that the state company Factory of the Wood Industry in Barlinek should be privatised.

Thanks to a considerable financial support, consistent policy of modernisation and expansion, increase in production of Barlinek floor could be observed. Soon it became the synonym of an engineered floor in Poland and other countries in the world.

We make the Barlinek flooring and skirting boards from the purest part of the log. Sawdust formed during production is used to make pellets and biomass.

# Whole wooden

## **We use 100% of raw material**

Barlinek is the only production facility in Europe with the whole production process concentrated in one site. This guarantees full quality control at every stage of production, as well as the most economical consumption of such a valuable raw material as real wood. Barlinek tries to make 100% use of it.

## **Real Wood**

Is non-allergenic, permanent and durable, warm to the touch, convenient to use, regulates the, micro-climate, unique

## **Barliek floorboard\***

it's 100% real wood, a stable structure resistant to changes in temperature and moisture, possible to lay over underfloor heating, fast and independently installed, possible to renovate, many times\*, top quality at a good price.

\* For detailed information on the installation and use of the Barlinek flooring, please refer to the installation manual and your warranty card.

# Flooring construction

## 1 Quick joint 5Gc

Faster and easier installation also in places difficult to access. Simple installation of angularly cut flooring. No additional tools needed.\*

## 2 Joint Barclick®

Fast and easy with the use of an assembly kit. High durability of the joint.

## 3 Wood protection system

Up to 7 layers of UV-hardened acrylic lacquer or a system of UV/natural oil.

## 4 Surface layer

Selected European or exotic wood of the appropriate thickness, protected with a lacquer or oil finish.

## 5 Middle layer

Coniferous layer arranged laterally to the surface and a bottom layer. Such construction limits the natural movement of the wood and prevents gaps, cracks and squeaking – even in constantly changing weather conditions.

## 6 Bottom layer

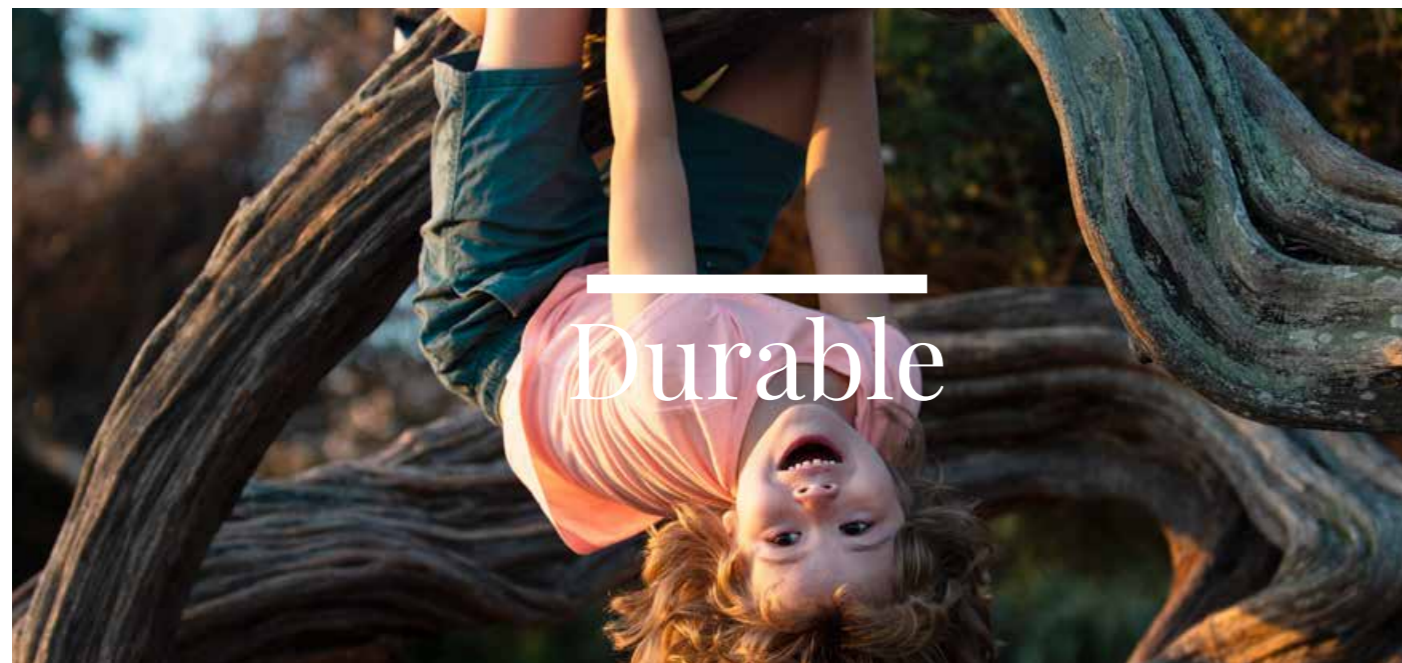

Coniferous wood arranged laterally to the middle layer reduces the natural work of wood.

\* For detailed information on the installation and use of the Barlinek flooring, please refer to the installation manual and your warranty card.

Whole wooden

Durable

Warm in touch

# Benefits of Barlinek floors

### 100% wood

Flooring is made of 100% real wood of the highest quality. We use 100% of this precious material. The sawdust remaining after production is used to make heating pellets and fireplace briquette. The bark is used in our gardens.

### Stable construction

The thickness of each layer of the Barlinek flooring is not accidental. It is the result of many years of experience, hundreds of hours of research and tests of the natural wood properties. Our expert knowledge has enabled us to develop a floor with an ideal construction to reduce the natural tensions of the material.

### Underfloor heating

Not every wooden floor is suitable for underfloor heating. Thanks to its layered structure, the Barlinek flooring perfectly conducts heat and can be successfully applied on both electric and water underfloor heating.

#### 100% WOOD

The Barlinek wooden floor is made of 100% natural wood of high quality.

#### STABLE CONSTRUCTION

A cross-layered design of the Barlinek wooden floor is very resistant to air humidity changes, which limits the wood creaking, swelling and drying.

#### UNDERFLOOR HEATING

Thanks to its cross-layered structure, the Barlinek floor is perfect for conducting heat and can be used on both electric and water underfloor heating.

#### HIGH ABRASIVENESS\*

A Swedish test has confirmed that Professional lacquer is more resistant to abrasion and stains than floors from leading European producers!

#### SAFETY

Our floors meet all stringent European standards in the field of health protection.

#### UNIQUE

Wood is, was and will be unforgettable structure the wood is unique.

#### QUICK JOINT

Thanks to our glue-free joints you can lay the floor yourself, quickly and without unnecessary tools.

#### WARM IN TOUCH

Wood in itself is a material that is always warm to the touch.

#### SILENT FLOOR

A subfloor system or gluing the floor to the subfloor neutralises tapping sounds.

#### VARIETY OF PATTERNS

There are over 100 patterns and colours, in various sizes and arrangement options.

#### SYSTEM SET

- Skirting boards, threshold and stair slats, expansion masking strips and rosettes. Clips for attaching board to wall and fitting skirting boards and slats.

#### POSSIBILITY OF RENOVATION

The Barlinek floorboard with a heavily worn surface layer can be sanded and re-coated with lacquer or oiled.

# Still more advantages

#### Reliable product

Providing customers with the highest quality wooden floors is our goal. We achieve this by means of quality control in its broad sense at every stage of production, from the design phase of the layer board, to raw material control, technological process, to production and final quality control of the finished product.

#### Wooden layered board

Wooden engineered flooring is a product that will last for many years. Bonding the top layer made of hard solid wood like oak, ash or beech with two pine layers at 90 degrees makes it a 100% wooden, natural and durable floor.

\* For detailed information on the installation and use of the Barlinek flooring, please refer to the installation manual and your warranty card.

Autumn-winter  
heating period  
dries the air

Spring-Summer  
high humidity  
air

# Tame the forces of nature

## 10 times greater dimensional stability

Our climate is a real challenge for the floor. Natural wood's moisture content will fluctuate depending on the weather outside. For this reason, it sometimes occurs that traditional wood floors swell, squeak or dry out causing splits. But not the Barlinek wooden floors! It is made not from one, but three layers of real wood arranged in a cross structure. The cross construction reduces natural tension and compression of wood, provides a balance between the layers of the board, and thus guarantees the stability of the floor, even under changing weather conditions outside.

## Perfect construction

The Barlinek wood floors is not one, but three layers of real wood arranged in a modern cross construction. The Barlinek wood floors layered structure ensures the floor's stability and enables the forces of nature to be tamed as effectively as possible. It is perfectly suited for underfloor heating.

\* For detailed information on the installation and use of the Barlinek flooring, please refer to the installation manual and your warranty card.

After ours  
the floors is walking  
over 250 million people

# We produce annually 14 mln m<sup>2</sup>

## The Barlinek group

is one of the world's leading manufacturers of layered wood floors, with potential production of 14 m m<sup>2</sup> per annum.

As well as the Barlinek floorboard, the group also produces certified flooring for sporting facilities, skirting boards and wood biofuels known for their high quality – wood pellet and fireplace briquette.

Barlinek place great importance to the technology applied and the company's finished products being ecological and environmentally neutral.

Constant modernisation of the plant and investments in modern technology have made this one of the cleanest company's in this industry in Poland. Barlinek activities show that for companies environmental protection can be more than just a legal requirement in certain countries – it can be a major element in a long-term development strategy.

## Oiled floors

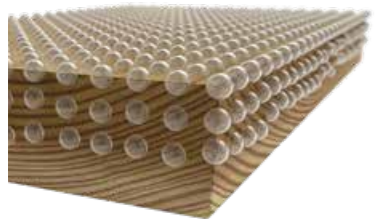

### Natural oil

Natural oil penetrates the pores of the wood, impregnating it against moisture and bringing out the natural features of the wood.

### The natural oil structure

The process of oil absorption by the structure. The oil hardens in contact with oxygen.

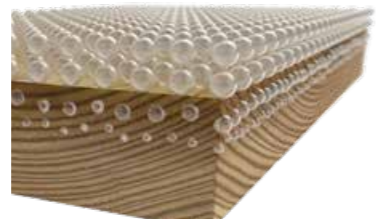

### UV oil

UV oil forms a protective oil coating on the surface of the wood and increases the floor's resistance to dirt.

### The UV-oil structure

The UV-oil structure hardens on impact with ultraviolet light.

## Lacquered floors

### Lacquered floors

Multi-layered coating with a UV-hardened lacquer system protects the floor by forming a surface safeguarding it against abrasion, dirt and micro-scratches.

### Matt lacquer

Emphasises the natural character of the wood floor and the depth of its design.

### Semi-matt lacquer

Intensifies the impression of cosiness and warmth.

### High gloss lacquer

An excellent solution for impressive elegant interiors.

# Barlinek Floors finishing

7 000 revolutions\*  
The most resistant  
lacquer on the market

### The Best in Test!

Barlinek flooring is victorious in an independent quality test of wooden floors conducted by the Technical Research Institute of Sweden. Our floor turned out to be more abrasion- and stain-resistant than floors from the other leading European producers!

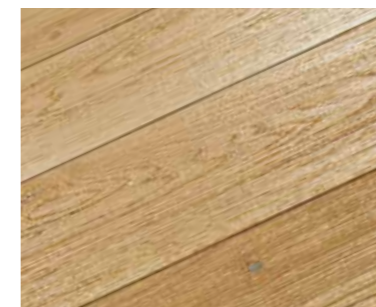

### Super-resistant Professional Lacquer

Super-resistant Professional Lacquer works excellently even in heavily used rooms. Winner of a Swedish abrasion resistance test. The results of the test also confirm that this is the lacquer most resistant to food stains, including coffee and red wine.

### Bevelling

Bevelling involves slightly trimming a small part of the flooring's edge to highlight the individual boards to make the room look bigger.

### Brushing

Brushing is a modern method of stressing the natural beauty of the wood graining and bringing out its structure. The texture of brushed wood is discernible to the touch.

### Staining

Flooring is coloured by coating the surface with lacquer, oil or refined stain with a protective layer of lacquer.

## Assemblage

### Standard installation kit

Installation kit includes the tools necessary to install multilayer flooring.

The set includes:

- metal holder
- wooden tapping block

ZEM001001

### Professional profiled tapping block

Used when assembling layered wooden floors with every kind of frontal and lateral lock.

- made from highly resistant plastic material.
- effectively absorbs the impact of a hammer

ZEM003002

## Floating Method Underlays Fix Mat

### FixMat SOUND 2,1SD

Durable polyurethane-mineral mat, thickness: 2,15 mm, integrated with vapor-barrier foil:

- Perfect for underfloor heating and cooling systems
- Ecological – up to 92% made from natural ingredients
- Makes the floor perfectly silent,
- Hard and durable – protects the locks against the damage
- Flame-retardant class BflS1
- A self-adhesive tape is integrated to help in joining the mat

Packaging 7,5 m<sup>2</sup> - POD007001

### Extreme 1.5

Professional, ecological underlay, thickness: 1,5 mm:

- Protects the board joints (heavy load resistance)
- Mutes the floor
- Perfect for underfloor heating (does not apply to Hybrid - WSPC floors)
- Is also suitable for Hybrid (WSPC) and SPC floors laid in a floating system

Opakowanie: 10 m<sup>2</sup> - POD007002

### Cork mat

- (thickness: 2 mm) - made of natural cork, durable and flexible:
- Good sound insulation
- Resistant to heavy loads (high density)
- Can be used on underfloor heating
- Easy and quick to install

Packaging: 10 m<sup>2</sup> - POD002001

### Underfloor board EKO

(different thicknesses

– 3 mm; 4 mm; 5,5 mm; 7 mm)

– made of natural wood fiber:

- Perfect thermal insulator (not suitable for underfloor heating)
- Will help with undulations of the subfloor up to ca. 3 mm
- (depending on the thickness)
- Good sound insulation
- Resistant to loads

Packaging: 9,32 m<sup>2</sup>.

grey tile 3,0 mm: POD001006

Packaging: 6,99 m<sup>2</sup>.

grey tile 4,0 mm: POD001003

grey tile 5,5 mm: POD001001

grey tile 7,0 mm: POD001002

## Adhesive Method

### Adhesive based on hybrid polymer

#### Barkiet 1K 950

Professional one-component adhesive, based on silane-modified polymer. Flexible, strong adhesive, wide range of applications, water free, EC1Plus low emission.

Recommended to all types of wooden floors (including factory finished engineered wooden floors). Suitable for underfloor heating. Solvent-free.

Packaging: 15 kg - KLJ001006

### Barlinek 1K STP Primer

Single component polyurethane primer for strengthening cement, anhydrite and concrete floors. Applied before gluing down the Barlinek board using Barlinek 1K STP adhesive. Solvent-free.

Packaging: 5L - KLJ001007

# Barlinek floors installation

### Advantages of the floating system:

- You can assemble it yourself, i.e. simple,
- cheap and quick assembly.
- You can lay it on top of old flooring and unrestored floors.
- The floor is ready for use immediately after installation.
- Damaged boards can be replaced easily.
- Possible to lay over underfloor heating.

### Advantages of the adhesive system:

- Very good acoustic insulation.
- No knocking or squeaking sounds
- It can be laid over large surfaces without the necessity to use expansion gaps
- Assembly system recommended for underfloor heating.

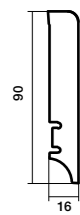

# White skirting boards

## Elite series

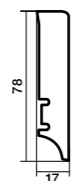

is a prestigious collection of natural wooden skirting, white painted. The skirting composes beautifully with any type of flooring. White skirting is recommended for any floor.

# Special skirting boards

Barlinek offers special skirting concealing dilatation, as well as stairs and treshold skirting.

## Oiled wood floors

Everyday  
care

### WASH CARE

Concentrate for everyday cleaning of naturally oiled wood floors. Refreshes the surface and prevents it getting dirty again. It has anti-slip properties  
Yield approx: 150 m<sup>2</sup>/1L.

PRT004003

First and  
recurring care

### WAX CARE PLUS

Preparation in undiluted form. Agent for first and periodic care of wood floors finished with natural oil. Regular maintenance with Wax Care Plus protects, regenerates and refreshes the surface. Displays hydrophobic properties.  
Yield approx: 100-110 m<sup>2</sup>/1L.

PRT004005

Thorough  
cleaning

### MAGIC CLEANER

Concentrate for very dirty and greasy wood floors coated with a natural oil, and for floors before renovation. Removes grease and dirt. The product does not contain bleach. Biodegradable.  
Yield approx: 100 m<sup>2</sup>/1L.

PRT004004

## lacquered floors

### PROTEKTOR CONCENTRATE

Concentrate for everyday care of lacquered floors. Contains no wax which facilitates the subsequent renovation of the floor. Does not leave stains or streaks. Forms a resistant, antistatic, non-slip film on the floor surface. It can also be used on stone and ceramic floors.  
Yield approx: 500 m<sup>2</sup>/1L.

PRT001002

### PROTEKTOR SHINE

A care agent for periodic maintenance of lacquered wood floors. Forms a highly resistant coating that is renewed during subsequent uses. Old and scratched surface regains its lustre without the need for lacquering. Product ready for use in undiluted form.  
Yield approx: 100 m<sup>2</sup>/1L.

PRT001001

### PROTEKTOR COMPLETE

Concentrated intensive-action agent for degreasing and periodic deep cleaning of lacquered floors. Effectively removes stubborn dirt, stains and old layers of pastes and other maintenance agents, including old coatings of Protektor Shine. Ideal for use before lacquering floors, and also before refreshing with Protektor Shine.  
Yield approx: 200 m<sup>2</sup>/1L.

PRT001003

# Floor care and protection

### Beautiful for years and years!

The worst enemies of a floor are water and sand. We keep it clean by sweeping, vacuuming and occasional wiping with damp (but not wet!) cloth. It is recommended to use cleaning articles suggested by the manufacturer for different types of flooring (natural oil, uv oil, lacquer). To protect from the damaging effect of sand and water, as well as salt in the winter, we should place mats near the entry of the house.

We should avoid walking on high heels on the floor. Furniture legs, pedestals and other forms of pressure on the floor should be secured with felt (but it mustn't be adjusted with nails). The floor under office chairs on wheels should be protected with mats. It is not recommended to mount flooring on surface with high humidity or exposed to direct contact with water.
